- Safely separates different voltage sources
- Dividers are quick and easy to install

NEW PRODUCT SHOWCASE

One Box – Two Voltage Sources

Kraloy is pleased to introduce the new INEXO® ICF box low voltage divider.

Used for residential applications, the new divider provides contractors with a quick, convenient and safe way to separate different voltage sources within the same box, most commonly telecommunications and electricity.

INEXO boxes along with the new dividers link seamlessly with existing ICF materials, tools and methods. As a complete offering designed for ICF walls, INEXO allows builders to standardize on the use of electrical boxes throughout the building.

INEXO boxes can be installed anywhere on the ICF wall allowing for more variety in box positioning as installers are no longer required to affix to the ICF ties or drill and secure to the concrete wall. These boxes are conveniently available in single, double and triple gang options for use in residential and commercial applications, and are fully certified to CSA standards for use in ICF and can resist pull forces exceeding 100 lbs – (twice the standard requirement).
